

Qteq's Centralizers are four leg poly composite unit, that is swiftly attached to the completion string in the same manner as all of Qteq's downhole pressure gauges and cable protectors. The centralizers provide additional stand-off clearance and shock protection for downhole monitoring systems. It is recommended to install centralizers in highly deviated wells and on completions that are subject to large vibrations during wells production operations.

Features and Benefits

- 90deg spaced protective legs
- Bevelled lead ins on all centralization legs
- Swift and secure installation through common installation techniques
- Proven design
- Poly Composite material for additional vibration dampening

Specifications

Size	2.375"	2.875"	3.500"	Other
Running OD	5.95"	5.95"	5.95"	TBA
	7.95"	7.95"	7.95"	
Length	4"			
Metallurgy	Poly Composite			
Installation	Stainless Steel Banding & Clip			
Application	Centralization of completion string, additional completion protection.
